

■ Contact Form with JavaScript Validation - README

This project is a simple and responsive **Contact Form** built using HTML, CSS, and JavaScript. It includes **client-side validation** to ensure proper input before submission.

Feature	Description
HTML Structure	Defines the form layout with Name, Email, and Message fields.
CSS Styling	Adds a clean, responsive design to the form.
JavaScript Validation	Ensures all fields are filled correctly before allowing submission.
Success Message	Displays a success message after a valid submission.

■ Project Structure - index.html → Contains the form layout. - style.css → Styles the form for a clean, responsive look. - script.js → Handles form validation and success messages.

■ How to Use: 1. Download all files (`index.html`, `style.css`, `script.js`). 2. Keep them in the same folder. 3. Open `index.html` in your browser. 4. Fill in the form and test the validation.

■ This project is perfect for learning **form validation** in JavaScript and building **user-friendly web forms**.
